

DRAWER CABINET TRAYS

If you don't mind a little work, you can make divider trays to save drawer space for small parts.

You will need to determine the desired size. Transfer that to card stock, perhaps with a drawing or word processing program.

Print the layouts and use the backside of a hobby knife blade to carefully score the lines. Cut out the box, fold and glue.

I use a database to print my dividers on 4x6 cards. It saved a whole lot of room and it helps identify parts quickly.
